

March 26, 2020

Dear OASD Families,

Thank you for your patience during these uncertain times. While it is unclear how long school closure will be, the OASD Health Services Team would like to address the topic of medications further.

Upon departure from school on Friday, March 13, 2020, each site's health assistant sent home your child's daily medications. Some families chose to keep their child's regular medications at school, reporting that there was enough at home.

**At this time, I am asking that families who still have medications, either daily or as needed (PRN) medications, that they anticipate needing during a possible extended school closure to reach out to me directly by the end of the day on Friday, March 27.** The communication should include your request to obtain your child's medication(s) along with your child's name and school site. You will receive a follow up email outlining the details of the process of picking up your child's medications.

When thinking about whether you should obtain your child's medication(s) from school, please consider only requesting at this time if:

- Your child has a daily medication(s) at school that you didn't think you would initially need at home but now do
- Your child has a daily medication(s) at school for 'just in case' situations that you now need at home
- Your child has an as-needed (PRN) medication at school that is not on supply at home
- Your child has an as-needed (PRN) medication at school that you may have a backup for at home, but the home supply is running low

**Your child's prescription will be available for curbside pickup at Oconomowoc High School-East Campus on Wednesday, April 1, 2020, from 7 a.m.-5 p.m.**

**\*\*Medications will only be available to those families that contact me ahead of time with their request\*\***

Should a more extended period of school closure be announced, communication will be shared regarding additional opportunities to obtain your child's medication(s).

Thank you for your collaboration and patience.

Shine on and be well!

Christy Deal, MSN, RN  
Director of Nursing Services
